Poured-In-Place Insulation System for Residential Basements and Commercial Foundations

Building owners are smarter than ever about the energy and moisture issues that affect a structure's long-term comfort and value. They know that conventional, below grade walls have long been plagued by energy loss, moisture absorption and condensation problems.

To eliminate these issues, owners are choosing THERMOMASS insulated poured walls that provide a solid foundation for energy-efficient facilities that are warm, dry, quiet and comfortable.

With the THERMOMASS Poured-In-Place Insulation System, you can get a better foundation - one built on solid science.

- Increased thermal efficiency
- Lower heating & cooling costs
- Superior moisture and mold resistance
- Strength & durability of poured concrete
- Increased resale value
- No insulation maintenance issues
- Energy Star rated product
- A recognized "Green" building material

Poured wall contractors install the Thermomass system using their standard forms.

Fully insulated, poured concrete walls.
